

Unified Unique-Config Evaluation Report

1. Executive Summary

This report reconciles 20t_report_v4.pdf and comparison_50task_report.pdf with one statistical rule: deduplicate to unique configs and exclude skipped configs from execution pass-rate denominators.

Slice	Pass/Executed	Rate	Scope
20t v4 seed0	99/168	58.9%	14 exec tasks
First20 P0 seeds1-4	404/672	60.1%	14 exec tasks
First20 combined seeds0-4	503/840	59.9%	14 exec tasks
50-report source only	1025/2862	35.8%	44 exec task IDs
All available prefill	1124/3030	37.1%	44 exec task IDs

The First20 discrepancy is denominator-driven. The 50-task raw-row First20 rate of 17.3% is not comparable to v4's unique-config rate. After deduplication, First20 P0 is 404/672 = 60.1%, close to v4's 99/168 = 58.9%.

2. Statistical Unit

Primary unit: one unique config encoded by trial_id. Skipped configs are excluded from execution pass-rate denominators. Raw rows are retained for duplicate and coverage audits. Rate-limited rows are kept in the requested primary metric. GT+5/10/20/50/100 means GT skills are included in a total candidate pool of 5/10/20/50/100 skills, not GT plus that many extra distractors. Timeout-excluded rates remove failed executions with wall time >600 seconds, agent_rc=124, or timeout/killed text.

3. Artifact Inventory

Smoke20	1500	1500	1500	0	30	1470	321/1470	21.8%
50-report source only	3210	-	3136	74	274	2862	1025/2862	35.8%
All available prefill	3450	-	3376	74	346	3030	1124/3030	37.1%

5. GT And GT+Pool Pass Rates

First20 comparable scope uses the same 14 executable tasks for GT-only and GT+pool conditions. 50-report source scope has no GT-only baseline for Smoke10/20.

Condition	Pool	Pass/Exec	Rate	Tasks
-----------	------	-----------	------	-------

Unified Unique-Config Evaluation Report

Condition	Pool	Pass/Exec	Rate	Tasks
GT-only	GT only	37/70	52.9%	14
GT+5	5	124/210	59.0%	14
GT+10	10	117/210	55.7%	14
GT+20	20	126/210	60.0%	14
GT+50	50	136/210	64.8%	14
GT+100	100	0/0	N/A	0

9. Verdict

Accuracy: the reports are consistent for First20 after the denominator is unified. The v4 report remains the better causal report because it has paired noskill and GT-only baselines. The 50-task report is a broader coverage ledger and should use unique-config execution rates for performance claims.

Main caveats: 6 First20 tasks never executed on host, Smoke10 is incomplete for 2 tasks, Smoke20 includes 30 design skips at pool_size=5, and aggregate rates across all batches are descriptive only.
